Sustainability Efforts
**for a better and
healthier Indonesia**

WHAT THEY SAID

Dear Sustainability Leader,

It has been a great pleasure for me to be part of this exciting joint European-Indonesian project, which was initiated by SwissCham Indonesia. I would like to thank each and every company that is portrayed in this e-book for submitting a proposal and for taking a leading role in promoting a more sustainable development in Indonesia.

The Sustainability Award is very timely. The COVID-19 pandemic has severely disrupted global economic activity and devastated lives and livelihoods. Many people feel uncertain about their future. But the pandemic also presents new opportunities to build back stronger and secure a greener future. This is where the B2O Sustainability Award 4.0 adds value. This Award celebrates real excellence in sustainability and rewards those companies that are setting the standard when it comes to doing business better by developing innovative solutions and using new technologies. This means companies that demonstrate that sustainable ways of doing business are not only possible but also profitable. I hope that this e-book will inspire other companies to follow suit.

I would like to thank SwissCham, KADIN, European Chambers of Commerce, the sponsors and the members of the Award Committee for their commitment to the sustainability agenda. I truly believe that this Award can and will make a difference.

**Kurt Kunz,
Ambassador of Switzerland to Indonesia,
Timor-Leste and ASEAN**

WHAT THEY SAID

I would like to congratulate the Swiss Chamber of Commerce, the European Chamber of Commerce and KADIN for initiating and co-organising the B2O Sustainability 4.0 Awards.

This excellent initiative bodes well with global efforts to get the 2030 Agenda for Sustainable Development back on track amid major uncertainties linked to geopolitical instability and rising global challenges.

I am delighted to see a showcase of fascinating projects in this book. These are real-world examples of a transformation to low-carbon, resilient and inclusive development pathways in Indonesia, not only from big corporations but also from small and medium enterprises. These pathways will reduce carbon emissions, conserve natural resources and advance the transition to a greener, more inclusive and just economy.

The EU is fully committed to accelerating the implementation of sustainable development and climate goals. Together with EU Member States, European development banks and the European Investment Bank (EIB), acting as 'Team Europe', we are coming together to mobilise a joint response to global challenges.

Team Europe has been supporting Indonesia's COVID-19 response and recovery, including through a package of over €200 million to support Indonesia's emergency responses, public health measures, assistance to vulnerable communities, as well as strengthening the health sector and pandemic preparedness.

As a strong and committed partner of Indonesia for over 30 years, the EU aims to reinforce our partnership towards a greener and more sustainable future. I therefore welcome the opportunities this opens up for further cooperation.

**H.E. Vincent Piket,
Ambassador of the European Union to Indonesia
and Brunei Darussalam**

WHAT THEY SAID

SwissCham Indonesia is an important partner in sustainability.

SwissCham has stepped up its commitment to action by initiating the B2O Sustainability 4.0 Awards. The awards are well-timed to coincide with the B2O summit in Bali.

Sustainability action requires cooperation on all levels across borders and sectors: public, business, and civil society. Through its organising partners and the diversity of nominations received, this cooperation is represented powerfully in the Awards. We can change our world for a better life if everyone does their part. All 244 nominees are clearly already doing so.

I hold myself accountable, and so do you.

Henry Chia,
Chairman of SwissCham Indonesia
President Director Endress+Hauser Indonesia

WHAT THEY SAID

Embarking on the journey to sustainability, we anticipate the expanded roles of market and business players as well as broader stakeholders to achieve the sustainable balance between economic success, social development and environmental protection. Our efforts in transforming to sustainable development, demands the power of businesses to speak up, take actions and coming up with innovative solutions to tackle the current and challenges ahead. More and more businesses have recognized sustainability as a strategic priority and in turn empower their organizations to lead, implement and share their expertise in sustainability across sectors and business models.

In line with its core mission, the B2O Sustainability 4.0 Award acknowledges the accomplishment of these businesses in creating a greater impact to an inclusive society, healthy environment, and economic growth, progressing towards a green economic development. European Chamber of Commerce (EUROCHAM), representing unified European voices, is acknowledging and encouraging great commitment especially from our member companies in setting out ambitious targets and in driving transformational impacts towards sustainability. We sincerely wish this will inspire others to joint and follow for the well-being of the current and future generation, society and nature.

Agus Ciputra,
Chairman of EuroCham Indonesia
President Director PT BASF

WHAT THEY SAID

KADIN Indonesia, or the Indonesian Chamber of Commerce and Industry, supports the B2O Sustainability Awards 4.0 as it celebrates and recognizes the accomplishment of exemplary businesses and individuals to further the Sustainable Development Goals (SDG) agenda. In line with our core values of sustainable development which drives productivity and growth in the 21st century.

More than a third of global consumers from developed countries say that they would change their consumption habits to reduce their environmental impact and are willing to pay more for sustainable alternatives, this is according to the 2021 global sustainability study.

The new bottom line is the triple bottom line; Profit, people, and the planet. Decarbonizing, recycling, empowering the marginalized, and going that extra mile to mitigate climate change and injustices requires capital and a hard realization from business as usual,

B2O Sustainability 4.0 Awards has provided a powerful platform to spread sustainability awareness among businesses, Conveying a solid message to the business community that shifting towards sustainable practices is possible beyond the headlines.

I hope this award will continuously send ripples across the business community, kickstart a contagious transformation in various industries and catapult the global community closer to realizing sustainable development goals by 2030 With all sincerity, I am amazed by the enthusiasm and effort of the finalists, the judges, and the board members. I want to congratulate all of the awardees. May your innovation grow with a broader reach and more profound impact.

I would also like to express my highest appreciation to the organizing committees. B2O Sustainability 4.0 Awards will be the historical marker in our sustainability journey. This journey of a greener transition will surely be full of innovation and opportunity discovery, and most importantly, it will create a better future for the next generation.

Yours Truly,

M. Arsjad Rasjid P.M,
Chairman of KADIN Indonesia
and Host of B2O Indonesia

WHAT THEY SAID

I believe sustainability is not a solo journey. In fact, it is about shared responsibility, how we all work collectively, building dialogue and inspiring action-oriented collaboration among industry as the implementation of SDGs 17: Partnership for the Goals. Business sector needs to envision themselves as the global solution and not part of the problem. Essentially, these efforts towards a more sustainable future will require collective action and shared responsibility for the better future.

Sustainability is always at the forefront of our priorities at B2O Indonesia. For years, we translate sustainability into real action by executing visible programs and projects that are generated in any part of the country. B2O Sustainability 4.0 Awards has amplified the role of MSMEs by allowing them to participate, signaling that sustainable development is not an exclusive space for large corporations or multinational companies. It says much about the importance of incorporating inclusivity and collaboration into sustainability, aligned with the theme of the B2O Indonesian Presidency this year, and bringing this commitment beyond Indonesia, echoed at the G20 level.

As the Chair of B2O Indonesia - the business engagement group of G20, we are committed to deliver actionable policy recommendations to G20 leaders. The work of B2O brings together business actors across G20 countries under one accord, making it a significant platform for businesses to extensively collaborate, observe, and discuss the most pressing issues that need to be addressed on a global level. B2O Indonesia is also committed to bringing together business communities towards a resilient, inclusive, and collaborative global economy by addressing key sustainability business issues in Indonesia.

I am proud to observe that many stakeholders have been playing it major contributions to sustainable development in Indonesia. I am sure even the judges made a difficult decision to choose the winners. As outlined by the committee, they have demonstrated innovative existing or forecasted verifiable results and evidence in sustainability, giving instrumental impacts to the society at large.

WHAT THEY SAID

These awards are one of many ways to appreciate the hard work and commitment made to push sustainable development in the midst of a rapidly changing economic landscape. I believe that Indonesia's commitment to successfully implementing Sustainable Development Goals (SDG) by achieving the 2030 development agenda has to be appreciated. In this regard, Indonesia positioned the SDG as the mainstream of all economic development at the central and regional levels to help the achievements rapidly. Through its strong commitment, I believe Indonesia can achieve its SDGs even earlier than 2030, especially with strong support and collaboration among all relevant stakeholders including us, and the private sector. The movement has to be widely shared with other parts of our communities, not limited to the big cities. To highlight in 2020, about 74% of villages contributed to the achievement of the national SDGs, and it is achieved because of the grassroots communities who play a pivotal role.

Considering all of the urgencies why we put so much effort to achieve sustainability, it is deemed important to note that every business must always consider the impact of the business activities on society, ensuring it is environmentally friendly and sustainable. Along with governments and all parts of society, businesses must go hand in hand to help the planet, we must foresee sustainability not merely as corporate responsibility action but also as a strategic imperative to shift the focus beyond business efficiency towards innovation that enables sustainability.

I am very excited to see the enthusiasm from all the finalists, each one showing promising potential and brilliant approach to address various sustainability issues. Imagine what a massive impact the world's major economies would generate, if we transformed from 'business-as-usual' to the sustainable ones by promoting, implementing, and fostering sustainable business practices.

To end my foreword, I would like to congratulate all winners and also extend my gratitude and high appreciation to the organizing committee. Thank you also to our partners and co-organizers, the Swiss Chamber of Commerce, Britcham along with other business chambers and sponsor companies. This friendship and cooperation will not be just a history, but an impactful one that we can proudly share with the future generation.

Because sustainability success can be supercharged through taking collective action as collective action is the key to sustainable future.

Last but not least, I would also like to invite all of you to participate in the B2O Summit on November 13-14 in Bali, which will certainly be an important opportunity for Indonesia as an emerging economy to lay the foundation for an inclusive post-crisis recovery in the years to come. This is the right time for all of us to collaborate on solutions that can be implemented on a global scale, especially in realizing a more sustainable future for all of us. Thank you.

Shinta W. Kamdani,
Coordinating Vice Chairman for Maritime Affairs, Investment and
International Relations of KADIN Indonesia and Chair of B2O Indonesia

WHAT THEY SAID

A viable approach to a sustainable world requires sustainability to be ingrained into our DNA. Besides conserving our planet's resources, Sustainability is also about creating places that encourage successful communities. Thus, initiating B2O Sustainability 4.0 Awards is the right move, where we exhibit businesses and individuals that embed sustainable practices by embracing societies in their agenda. I genuinely hope that this award will influence a significant impact on the implementation of the Sustainable Development Goals among businesses and individuals in Indonesia and aims to bringing together business communities towards a resilient, inclusive, and collaborative global economy by addressing key sustainability business issues in Indonesia.

I am grateful to initiate this award, connect the key stakeholders in sustainability, and discover that all submitted contributions show their commitment in making a sustainable world.

The B2O Sustainability 4.0 Book aims to inspire and support our mission in enhancing the collaboration amongst the stakeholders. The achievements and impacts that have been done by the 200+ companies and SMEs show a better future of the next generations.

I would like to convey my gratitude to KADIN, European Chambers of Commerce, our sponsors, jury members, and the award committee members for their collective efforts and commitment that yielded a great outcome. Looking forward to having more contribution and working together to bring positive, sustainable impact for our future.

ACCESS TO CLEAN WATER

The Winner - Corporate

Danone Indonesia

Danone Indonesia is part of the Danone group, one of the world's largest food and beverage producers. Danone's business is represented in Indonesia through Danone Specialized Nutrition Indonesia, and the water business through Danone-AQUA. In Indonesia, the rural water utility only serves around 25% of households on a national average due to a lack of access to financing. Danone came up with the Water and Sanitation Credit Program where they target two critical players in water utility financing. Under cooperation with water.org, the first intervention is strengthened and finance KPSPAMS (a clean water infrastructure management group run by the community) through a micro-credit scheme. Second, they provide assistance for financial institutions to develop water and sanitation loans for the KPSPAMS. They also developed DIGITIRTA, an application to facilitate water meter recording and daily financial bookkeeping. To ensure the project's sustainability, they have also managed to advocate the central government's commitment to developing a water credit scheme by setting the national Standard Operational Procedures for water and sanitation credits. This project has distributed 4.8 billion liters of clean water per year, reached 219,610 beneficiaries, 119 KPSPAMS, 4 financial institutions, and 2 credit insurance companies in East Java and Central Java, with a total capital loan of Rp5,877,400,000 mobilized.

Danone is also awarded with an Outstanding Achievement Recognition for achieving the high performance in the Access to Clean Water and Reduce and Reuse Plastic Categories

ACCESS TO CLEAN WATER

The Winner - SME

PT Tinamitra Mandiri

Komodo Water is a social enterprise providing clean water access and sustainable water management. Despite the growing tourism industry in Komodo Islands, the residents in its remote areas had to bear with scarce fresh water supply as well as a dry climate. The conditions lead to the excessive use of single-use plastics due to the packaging of clean water and ice packs they had to buy from Labuan Bajo. Since 2011, Komodo Water has provided freshwater access to 7 villages with more than 2,000 people in Papagarang (East Nusa Tenggara) and its surrounding islands. Together with the villagers, they designed a water solution by providing solar-powered brackish water desalination and an ice flakes machine, delivering 106,694 gallons of water (until July 2022) and 140 kg of ice packs per day, creating 6 jobs for the local community in the process. By doing so, they avoided 40 tonnes of single-use plastic waste. In 2019, they converted their Reverse Osmosis system into a 100% solar-powered one. Since then, freshwater production has avoided 30,000 liters of fuel consumption annually. Along the way, they also educated more than 1,500 communities on healthy lifestyles and healthy water.

Besides Papagarang Island, they installed a solar water pump to provide clean water access for 2000 people in Kawa Village, Nagekeo, East Nusa Tenggara. Also, they installed a solar-powered water filtration technology to provide drinking water for 2000 people in Bari Village, West Manggarai, East Nusa Tenggara. They are committed to expanding clean water access and drinking water in other villages in Indonesia

ACCESS TO CLEAN WATER

The Runner Up - SME

Gree Services Indonesia

Gree Energy empowers the food industry in emerging countries to cut methane emissions, treat wastewater, and create opportunities for clean energy in underserved rural communities. Gree Energy makes biogas projects financially viable by unlocking the full potential of carbon crediting programs, renewable energy and green finance. The project is a partnership with PT Hamparan Bumi Mas Abadi, a large tapioca starch manufacturer in Lampung. The area experiences unstable electricity and frequent power outages, resulting in the industry's productivity loss and damaging household electrical appliances. Mills in Indonesia usually treat wastewater through lagoons which still releases methane into the atmosphere. A proper wastewater treatment can cost as much as building a new mill, making the technology inaccessible for food processors and a huge opportunity loss to provide renewable energy.

Gree Energy transfers the European biogas technology, a mature and mainstream solution, to the Indonesian market. Gree Energy unlocks the full power of biogas by capturing methane, treating effluents, and producing renewable energy. This project decarbonized the food industry supply chain, generate electricity for rural communities, and stabilize the local grid through a biogas-to-energy plant, the impacts are:

- 333,000 population equivalent of domestic waste removed by wastewater treatment.
- 30,000 CO₂eq emissions reduced, equivalent to removing 6,500 cars from the road each year.
- 9.8 GWh clean and reliable electricity generated, enough to supply 20,000 people in 19 villages with clean and reliable energy.

REDUCE & REUSE OF PLASTIC

The Winner - Corporate

Lazada Logistics

Lazada Logistics, Lazada Group's logistics arm, is a trusted, one-stop logistics solution for Southeast Asian brands and sellers. As a pioneer in eCommerce logistics, Lazada Logistics provides hassle-free end-to-end services for businesses, and connect them with consumers in one of the world's most populous and geographically diverse regions.

By taking into account on the current concern on plastic use and the fact that consumers nowadays wish for a change in more sustainable packaging, Lazada Logistics in Indonesia initiates a project to implement FSC-certified sustainable packaging in its operations. Throughout the year, Lazada Logistics' Fulfillment by Lazada (FBL) service has recycled approximately 1,085,000 kilograms of carton boxes into shredded papers to substitute an equivalent of 460,000 kg of plastic wrap. This initiative has successfully reduced up to 76% plastic usage in a single-use parcel, making Lazada's FBL parcels more sustainable. Since Jun 2021, Lazada has delivered over 12 million sustainable packaging to consumers across Indonesia.

Moreover, Lazada Group commenced LazEarth campaign in commemorating world's 2022 earth day to raise a responsible consumption awareness by partnering with brands and partners in Indonesia.

REDUCE & REUSE OF PLASTIC

The Winner - SME

PT Hapus Sampah Nusantara

Sampangan is a company that shows the future of recycling. Aware that residual waste is not able to be recycled conventionally, Sampangan came up with an innovative solution. With their own patented technology called the Magic-Box, Sampangan does not only stop the life-cycle of plastic waste but gives new life to them. The Magic-Box is a waste processing machine that can convert all residual waste (up to 10 tons/ day per unit machine with no manual sorting needed) into sustainable new materials and products. The products are valuable and have circular economy use, such as activated carbon, liquid smoke, and bio-fertilizers.

Sampangan's Magic-Box is a negative-carbon waste processing machine certified and audited to be pollution and residual-free, using waste as its energy source to run the machine sustainably. Moreover, it requires a low cost of operation in terms of workforce, maintenance, and electricity. By 2022, Sampangan has already processed 95,000 tons of waste. Using the assumption of 255.5 kg of waste produced annually per person, around 371,820 people are estimated to have been helped by this project.

+62 8112 365 4526

REDUCE & REUSE OF PLASTIC

The Runner Up - SME

PT Peduli Alam Nusantara

PLANA is an innovative company producing environmentally-friendly decking. Currently, Indonesia produces 7 million tonnes of plastic waste annually, growing by 5% annually. Furthermore, decking requires the use of wood and hence is part of the deforestation problem. Aware of the severity of plastic waste and that recycling does not solve it entirely, PLANA produced a novel solution called PlanaWood. Referred to as “The Next Generation of Wood”, PlanaWood is made of plastic waste and rice husk (waste produced by farmers that is usually burned). PLANA's technology converts plastic waste into something considerably more valuable, extending its usage time and durability. Using this technology, buyers contribute to reducing greenhouse gas emissions by saving the forest, helping farmers' well-being, and reducing plastic waste in landfills or oceans.

For every 100 m² of PlanaWood used, buyers help save around 382 Regular Standard Trees and recycle 1.5 tons of waste. Thus far, PlanaWood has helped substitute 280,000 regular standard trees, used 400+ tons of plastic waste, utilized 880+ tons of husk waste, and helped 100+ local farmers.

WOMEN IN SUSTAINABILITY

The Winner - Corporate

PT Amartha Mikro Fintek

Amartha is a company that focuses on enabling unbanked microentrepreneurs to connect with lenders. Amartha prioritizes womenpreneurs who find it challenging to reach loans at conventional banks due to limited collateral, income fluctuations, and lack of credit history, especially in rural areas. They use the Grameen approach in their business (tanggung renteng), which is suitable for ultra-micro and micro-entrepreneurs.

Amartha has accomplished many significant impacts thus far. Mitra Amartha (the finance borrowers) consists of 87,000 workers where 75% of whom are female workers. Around 80% of these female workers have never been served by formal financial institutions. They have also received an increase in income by 10.5% from Rp1.8 million to Rp4.2 million. Moreover, 103,603 Mitra Amartha microentrepreneurs obtained financial literacy, and 45,000 partners received entrepreneurship education. 97.9% of Mitra Amartha microentrepreneurs can send their children to school, renovate houses, and help the family's economy. Amartha has empowered 1,172,127 women entrepreneurs in rural areas in all of Sumatra except Aceh, Java, and Sulawesi. This information is regularly updated on www.amartha.com. By now, their application has been downloaded more than 100,000 times on the Playstore.

WOMEN IN SUSTAINABILITY

The Winner - SME

PT Karya Dua Anyam

Du Anyam is a social enterprise that aims to empower women weavers in remote Indonesia through the co-creation and sale of handmade indigenous weave-based products.

Driven by the desire to improve maternal and child mortality rates, Du Anyam was founded in 2014 to champion women empowerment and financial inclusion by vitalizing a new weaving economy.

Adopting an end-to-end business model, Du Anyam has paved the way to co-create and design weaved products, conduct skills training, establish quality control standards, manage supply chain and marketing of the products. The Du Anyam collection now includes corporate souvenirs, hotel amenities, and home decorations; handmade by rural women artisans using locally-sourced natural fibres materials.

To date, Du Anyam has empowered over 1,400 women artisans in more than 54 villages located in East Nusa Tenggara, South Kalimantan and Papua.

WOMEN IN SUSTAINABILITY

The Runner Up - SME

S U K K H A C I T T A

VILLAGES NOT FACTORIES

PT Sukkha Citta Indonesia

Sukkha Citta is a B Corp certified fashion brand that works to end the exploitation of women in villages while reversing climate change. They wish to tackle the negative impacts of climate change on farmers and women in Indonesia's villages, soil degradation, lack of opportunity in rural areas, and the environmental impact of imported materials for a rapidly growing fashion industry. Sukkha Citta empowers rural women by creating environmentally conscious materials for which there already is a demand.

Sukkha Citta has empowered greater than 1,482 people by channeling more than 56% of profits from purchases back to the village. It has also funded 4 craft schools for artisans and funded 36 scholarships that enable young women to learn inherited crafts and skills to lift themselves out of poverty. Sukkha Citta also creates impacts on the environment. It has regenerated 20 Ha of soil by working with smallholder farmers to grow organic cotton and plant dyes through regenerative farming. Furthermore, 1.2 Mio of toxic water waste was prevented by switching to 100% traceable natural dyes, and 25 tons of CO2 was saved by up-cycling waste fabrics & minimizing offcuts.

REDUCE & REUSE OF PLASTIC

Danone Indonesia

Danone Indonesia is a multinational company engaged in the manufacturing and sales of bottled water products. Aware of the current plastic issues and wishing to help the government achieve the target to support government to reduce 70% plastic waste into the ocean, Danone Indonesia has come up with a multi-faceted solution. The '#BijakBerplastik' movement helps reduce plastic problems, from raising awareness to creating a circular economy system. The project has made many significant impacts in increasing the amount of waste that is recycled by 17%, thereby reducing the amount of waste remaining in the landfill by 14% and reducing the volume of waste that ends up in marine ecosystems. This movements have involve 10,000 waste pickers across Indonesia, which have collected more than 15,000 tons of plastic annually.

www.danone.co.id

corporate.communicationsID@danone.com

+6221 299 615 55

PT Plastic Bank Indonesia

Plastic Bank Indonesia is a social enterprise that empowers ocean stewards to stop ocean plastic and improve their members' livelihood. Indonesia currently produces 7.8 million tons of plastic annually, while there are 3.7 million waste pickers (or pemulung), with an average wage of only IDR 11,000 per day. To address these issues, Plastic Bank Indonesia collaborates with plastic collection communities to collect and prevent plastic from flowing into the ocean. Their members benefit from increased income, health and working insurance, digital connectivity and social and banking services. The plastic will be recycled into Social Plastic® raw materials for reuse in products and packaging. Thus far, they collected 30 million kilograms of plastic and impacted more than 12,000 waste pickers across 10 provinces by increasing their income up to 29%.

www.plasticbank.com

debora@plasticbank.com

+62 812 9142 4475

PT Wasteforchange Alam Indonesia

Waste4Change is a social enterprise founded in 2014 that gives waste management services in an sustainable and responsible approach. Aware of issues in data gaps and traceability of plastic waste collection from the informal sector, they wish to digitalize the collection records in order to acknowledge their contribution. This is vital, thus, the data of waste management in Indonesia can be made available clearly and transparently then its handling can run optimally and sustainably. With their digital system in place, called the Extended Producer Responsibility (EPR), Waste4Change has helped recycle more than 731 tons of plastic waste as well as the application of digital technology to more than 50 partners.

KEARNEY

Kearney is a leading management consulting firm – headquartered in Chicago, with offices in more than 40 countries. Since 1926, we have been trusted advisors to the world's foremost organizations across all major industries and service sectors. In Southeast Asia, we operate with ~200 consultants working across our offices in Jakarta, Singapore, Kuala Lumpur, Bangkok, and Manila. From our Indonesia office, Kearney supports both private and public sector clients as well as government ministries to excel and prosper by combining our regional expertise and global business insights to achieve results.

Kearney is a partner-owned firm, committed to helping clients achieve immediate impact and growing advantage on their most mission-critical issues. We are passionate problem solvers who excel in collaborating across borders to co-create and realize elegantly simple, practical, and sustainable results.

At Kearney, sustainability is a shared ambition. We are the first management consultancy in the world to have its near- and long-term science-based emissions reduction targets approved by the Science Based Targets initiative (SBTi). As we help our clients collaborate with those in their value chain and learn from peers, we too are committed to making changes that better serve the planet and our people. We realize that it is time for setting clear ambitions, backed by practical decisions with tangible results and we aspire to play a part in driving positive impact for our people, our communities, and the planet.

SUPPORTING PARTNERS

The British Chamber of Commerce in Indonesia (BritCham) has represented business for 42 years and builds on a British business presence that extends more than a hundred years.

Over those years, we have had the pleasure of welcoming the most influential politicians, business leaders, world commentators, renowned experts in various fields and academicians as guests to various forums.

Working in partnership with the British Embassy (DIT) and the British Council, whose senior representatives sit on our Board of Management, BritCham is committed to developing a services infrastructure that supports all stages of business development right from their inception in Indonesia.

The BritCham Education Centre supports academic and vocational partnerships. It helps young Indonesian to select the university, providing support for internship and work experiences. Our BritCham Business Centre represents a one-stop-shop for the journey of market access for trade and investment.

BritCham is committed to being a reliable partner across a wide range of stakeholders.

Vision: Britain and Indonesia, Winning Together

Mission Statement: To be the leading business membership association. Promote and facilitate trade and investment growth between Britain and Indonesia through our diverse network.

SUPPORTING PARTNERS

The German-Indonesian Chamber of Commerce and Industry (AHK Indonesien / EKONID) acts as a strategic interface between the German and Indonesian economies. We represent the mutual interest in business relationships of German and Indonesian companies, organizations and institutions. Our main activity is to support companies from both nations in exploring new areas of investment and establishing business relationships. We are a meeting point, information center and first point of contact for companies interested in doing business in and with Indonesia.

EKONID offers a variety of services under the DEinternational brand - from general market information to services specially tailored to the respective company for a successful market entry, e.g. business partner search, support in legal questions and participation in trade fairs.

In addition to its main location in Jakarta, the chamber of commerce is represented in Surabaya by an office, the so-called Wisma Jerman - a cooperation between the Goethe-Institute and EKONID, which is supported by the German Embassy Jakarta. Wisma Jerman offers language courses, events and the services from the EKONID service portfolio.

UNIVERSITAS TRISAKTI

Established in 1965, Trisakti University is an academic institution that is at the forefront of education. In accordance with our campus' Vision & Mission, we firmly believe and hold on to the principles of Sustainable Development. We have integrated our commitment to support Sustainable Development into the Tri Dharma of Higher Education pillars: Education and Teaching, Research and Development, and Community Service.

In line with our commitment, Trisakti University has established the first Masters in Sustainability (MM-Sustainability) and CSR Masters (MM CSR) programs in Indonesia. Both programs aim to educate and equip new leaders in sustainability. Moreover, Trisakti University has 2 Sustainability centers, namely Center for Entrepreneurship, Change and Third Sector (CECT) and Trisakti Center for Sustainability (TCS). These two institutions provide education and assistance to organizations, institutions, or companies to achieve sustainability as a manifestation of the 17 Sustainable

Coventry University see sustainable development as critical to integrate into all our actions and this underpins our education and student experience, research with impact and enterprise and innovation. We play a critical role in delivering the UN Sustainable Development Goals (SDGs), and in developing the ideas and technologies required to embed sustainability within government, business and wider society.

To mark our full commitment to SDGs, we signed the University and College Sector's SDG Accord in early 2018. The SDG Accord calls upon us to embed the Sustainable Development Goals into our education, research, leadership, operations, administration and engagement activities.

Our research activities already contribute to many of the SDGs including those carried out at the Centre for Business in Society (CBiS). In particular, the Sustainable Production and Consumption (SPC) research cluster within CBiS (<https://intip.in/sdg12>) focuses on SGD 12 whose ultimate goals of living within environmental limits and the attainment of social justice, through the delivery of responsible business and ethical consumption practices. The circular economy and sustainability underpin our work.
